Are you designing or revising a course syllabus?

All students benefit from an organized, well-written and complete syllabus. They are also better equipped to plan their semester if they have a clear idea of their educators’ expectations, the demands of their courses, and the due dates of their assignments. With these tips you can make your course and syllabus accessible to the greatest number of students.

General tips on writing an accessible course syllabus

- Communicate clearly the essential requirements of the course to all students, including learning outcomes.

- Include a course outline that covers the required readings, assignments and defined expectations.

- Encourage students to tell you about any accessibility concerns.

- Describe your teaching philosophy.

- Highlight any outings, labs and all deadlines. Specify any activity that might be out of the ordinary, such as changes in time or class location.

- Provide contact information and office hours for all instructors involved in the course (for example, professors and teaching assistants).

• Give students more than one option for getting in touch with you — via email, by phone or visits during designated office hours.

• Consider having multiple methods of student evaluation, such as exams, presentations, papers, etc. There may be more than one appropriate way to meet and measure learning objectives.

• Ensure ample time between assignments for students to receive feedback before the next assignment is due. Consider the time required for your students to complete assignments, and for you and your teaching assistants to mark and return assignments.

• Review your syllabus throughout the course. Send any updates to students, or post them where the class can receive them in an accessible format.

• Review your syllabus on an annual basis. What could be changed?

• Learn from your peers and discuss what works well.

• Your university offers services to help you create an accessible environment for learners. Consult the teaching and learning office and/or centre for students with disabilities for more tips and to find out about supports that are available.

**Make the document accessible**

Some students use assistive technology to adapt information into a usable format for their learning needs. Some examples of assistive technology are:

**Screen readers:** These read aloud information on a computer screen, such as written text, or the description of an image provided through alternative text or Alt Text.

**Screen enhancement software:** This allows users to magnify the computer screen or change the contrast to make the content easier to see.

• Your syllabus will be one of the first contact points that students have with your class. Providing the document in an accessible format — one that can be read easily and used by an assistive technology such as a screen reader— will demonstrate that your course is inclusive.

• Make the syllabus available electronically to all students, and update it if there are revisions during the course; this could be done through a learning management system, such as Blackboard, Web CT, Desire2Learn, Moodle or Sakai; by email or on the course website.
List campus supports and policies

- Use the syllabus to inform students about other services on campus that could assist them — for example, the centre for students with disabilities, counselling services, writing centre, library services, etc.

- Include relevant university policy statements on issues, such as academic integrity, student code of conduct and accessibility for people with disabilities.

Include an accessibility statement

Including an accessibility statement as part of your syllabus gives you an opportunity to demonstrate your willingness to provide reasonable accommodations in your class for students with disabilities.

Sample course accessibility statement

Below is a sample accessibility statement from the University of Toronto.

“The University provides academic accommodations for students with disabilities in accordance with the terms of the Ontario Human Rights Code. This occurs through a collaborative process that acknowledges a collective obligation to develop an accessible learning environment that both meets the needs of students and preserves the essential academic requirements of the University’s courses and programs.”

Choosing course materials

- Choose course materials early. If you are assigning a number of readings, this will allow you enough time to have the documents converted into alternative formats or for students to request the formats they need from the bookstore.

- It’s useful to cover core material through a variety of mediums — for instance, lectures, textbooks and/or visual presentations.

- If possible, choose accessible electronic versions of course readings. This will allow students the ability to convert the reading into the format required, whether they use a screen reader, an enlarger or other technology.

- Note that some PDFs (Portable Document Format files) are not accessible to students using a screen reader; when possible, choose tagged PDFs, which may be read by assistive technology. (Look for the related Tip Sheet: “Using Word documents and/or PDFs” for more information.)

- If you use video or audio files, consult with your disability services office. Captioning or transcripts must be provided on request for students with disabilities.
disabilities. They may also be beneficial for students whose first language is not English and for the entire class.
