GOOD RESEARCH HABITS

Research environments usually mean more independent work. This can be unfamiliar if you're more used to well structured course environments. Working with integrity means developing good habits such as:

▶ Collecting and handling data honestly.

▶ Learning about Office of Research Ethics and Integrity.

▶ Discovering our uOttawa library research help.

▶ Learning about working with your sources.

▶ Accurately identifying researchers' relative contributions and conducting fair peer review.

▶ Being honest and transparent in research and reporting findings, including when using tools like artificial intelligence.
