A word from the dean

As the interim dean of the Faculty of Engineering, it is my pleasure to present this year's **Annual Research and Impact Report**. When we look back on this inspiring year of achievements, we note that the Faculty of Engineering at the University of Ottawa continues to position itself as a leader in research, innovation and education. This year, we celebrated several milestones that highlight our commitment to addressing global challenges and advancing technology for a better future.

Continued on page 4

We witnessed **extraordinary strides in research, innovation and education**. Our researchers have continued to address some of the world's most pressing challenges, from advancing sustainable technologies and building resilient communities to enhancing cybersecurity through the uOttawa-IBM Cyber Range. Our researchers not only push the boundaries of knowledge, but also make a tangible difference, both locally and globally.

We have also strengthened our **partnerships with industry leaders**, such as Canadian Nuclear Laboratories, Ciena and Cisco, to create new opportunities for research collaboration, student engagement, and innovative solutions. These alliances amplify our impact by driving advancements that shape the future of engineering and beyond.

We have also embraced a transformative shift in education by **launching two new online master's programs**, namely a master's degree in artificial intelligence and a master's degree in digital transformation. These programs are designed to equip professionals to lead in rapidly evolving technological environments, which reflects our commitment to accessible, forward-looking education.

Our Faculty's commitment to encouraging **entrepreneurship and design** has never been stronger. Through initiatives such as our

entrepreneurship incubators, design competitions and multidisciplinary collaborations, we continue to empower students and professors so they can bring their innovative ideas to life, shaping industries and creating lasting impact.

And thanks to our **outreach programs**, we continue to extend the impact of engineering education and innovation to a wide range of audiences across Canada, impacting over 43,000 youth yearly.

This report also highlights the **critical role of our students**, whose creativity and passion drive many of our initiatives. By working alongside our researchers and industry partners, they are shaping a future that is equitable, innovative and sustainable.

As we reflect on these achievements, we remain committed to **fostering an environment that encourages diversity, interdisciplinary collaboration, and excellence in engineering and computer science**. I am immensely proud of the contributions of our researchers, staff, students and partners, and I invite you to explore the transformative projects featured in this report.

Together, we are making the future.

Sincerely,
Michel Labrosse

About the University of Ottawa

Growing global recognition of the University of Ottawa (uOttawa)'s research strength and its leadership in sustainability has powered the institution to its best-ever result in the influential QS World University Rankings 2025. Climbing 14 places, uOttawa has surged into the Top 200 with a global ranking of 189th out of 1,503 universities.

Top 10

About the Faculty of Engineering

The Faculty of Engineering at the University of Ottawa is a leader in engineering and computer science education and research, providing its students with top quality degrees and experiential learning experiences to prepare them to meet the ever-changing needs of society.

Departments and schools

- ☑ **Chemical and Biological** Engineering
- ☑ **Civil** Engineering
- ☑ **Mechanical** Engineering
- ☑ School of Engineering **Design and Teaching Innovation**
- ☑ School of **Electrical** Engineering and **Computer Science**

☑ Online programs

Our online master's programs are designed with engineering professionals in mind. Through a combination of core courses and electives, tailor your online program to your career goals.

QUICK FACTS

5,000+ undergraduate students

2,000+ graduate students

140 professors

130 support staff

24+ students' clubs and competitive teams

28,400 alumni in 103+ countries

193 international collaborations in 58 countries

43,000 yearly youth outreach including girls and indigenous youth

Research impact

Areas of research

-  Enabling technologies for health care and augmented life
-  Technology for the digital transformation of society
-  Sustainable and resilient infrastructure
-  Emerging materials and processes
-  Photonics for devices, networks and energy

achievements.

Dr. Robert Delatolla, Professor, Faculty of Engineering

Dr. Robert Delatolla aims to integrate wastewater-based surveillance into public health decision-making processes to protect Canadians, especially at-risk, marginalized and priority populations, against health threats.

WASTEWATER SURVEILLANCE EXPERT ROBERT DELATOLLA NAMED APPLIED PUBLIC HEALTH CHAIR

Dr. Robert Delatolla, environmental engineering professor at the uOttawa Faculty of Engineering and director of the national CoVaRR-Net Wastewater Surveillance Research Group, is part of the fourth cohort of Applied Public Health Chairs announced by the Government of Canada. The twelve new chairs will receive a total of \$13.8 million to tackle research projects related to public health and will work with the government to inform policy decisions and solutions.

Delatolla aims to build on his groundbreaking COVID-19 wastewater surveillance work and better integrate this data into decision-making processes.

Making this data available to policymakers and the public helps protect people against health threats, including possible pandemics, and promotes health equity.

Delatolla's research during the COVID-19 pandemic made it possible to detect spikes in virus levels early through wastewater surveillance. His team's data was used by agencies and individuals to inform public health decisions. The wastewater research group has since started applying its surveillance system to other viruses and health threats such as tuberculosis and respiratory syncytial virus.

A portrait of Dr. Mamadou Fall, a Black man with short dark hair, smiling. He is wearing a dark blue suit jacket over a light blue dress shirt and a blue tie with small white polka dots. The background is a solid light blue.

Dr. Mamadou Fall, Distinguished University Professor,
Faculty of Engineering

Dr. Fall's research in the field of geotechnical and geoenvironmental engineering has been recognized through several prizes and distinctions.

FACULTY OF ENGINEERING RESEARCHER MAMADOU FALL NAMED EIC FELLOW

Dr. Mamadou Fall, chair of the Department of Civil Engineering and distinguished professor in the Faculty of Engineering at the University of Ottawa, has been named a fellow of the Engineering Institute of Canada (EIC), for his exceptional contributions to the field of engineering in this country.

Approximately 20 outstanding researchers from the 14 federated societies that comprise the EIC are named fellows every year. Dr. Fall, also University Research Chair in Geotechnical Engineering for Net Zero Transitions and vice-president, technical, of the Canadian Geotechnical Society, was recognized at the EIC gala banquet on April 20. This prestigious

honour recognizes the career achievements of Dr. Fall and his contributions to his field and to society.

Dr. Fall has studied mine waste management, underground disposal of nuclear waste, energy geotechnics, landslides, geotechnical hazards, and sustainable and recycled construction materials. He has authored or co-authored over 250 research publications and serves on the editorial boards of several scholarly journals. His collaborations with industry have led to his research findings being implemented in a number of companies and agencies and highlighted in conferences and seminars globally.

Research highlights

Our focus: collaborative, interdisciplinary research that is of public value and considers the social, environmental, and economic impact of its solutions and findings.

Dr. Paria Shirani, Assistant Professor,
Faculty of Engineering

Professor Paria Shirani
analyzes and develops solutions
to help safeguard our lives and
resources against
cybersecurity threats.

PROTECTING THE INTERNET OF THINGS FROM CYBERATTACKS

Our world is filled with smart devices that are connected to each other. This interconnectedness, which makes our everyday lives easier, is also what makes these devices vulnerable to cyberattacks. In light of such vulnerabilities and the potential to target critical infrastructure within our smart cities, preventing cyberthreats is of utmost importance.

The Internet of Things (IoT) is a system of interconnected devices that share data across networks in real time, often through various communication protocols. "Deploying these devices almost everywhere increases the attack surface and provides more opportunities for the attackers to compromise critical infrastructure,"

explains Professor Paria Shirani, an assistant professor at the School of Electrical Engineering and Computer Science.

Such attacks can lead to severe service disruptions across cities, provinces, and even the country, so developing practical solutions to secure IoT devices is critical to preventing devastating effects.

Shirani's research stretches into analyzing malware, identifying malicious actors through code fingerprinting, enhancing IoT security, researching specific vulnerabilities and generating intelligence about threats.

Mandy Lewis, Electrical engineering doctoral candidate & the paper's lead author

"We found that highly reflective white surfaces can boost solar power output."

Mandy Lewis

RESEARCHERS AT UOTTAWA BOOST EFFICACY OF SOLAR PANELS

Solar energy is a crucial asset in the fight against climate change, and researchers at the University of Ottawa have devised a smart approach to optimize its effectiveness. Their innovative method includes incorporating artificial ground reflectors, a simple yet powerful enhancement.

The researchers found that by integrating these reflectors into solar setups, they could improve the system's energy production and efficiency, making such projects more economically viable. This discovery is significant in assessing the costs and benefits of using artificial reflectors in solar energy ventures.

To study how reflective ground covers affect solar energy output, the University of Ottawa's SUNLAB, led by electrical engineering Professor Karin Hinzer, who is also vice-dean, research of the Faculty of Engineering, collaborated with the National Renewable Energy Laboratory (NREL) in Golden, Colorado, a world leader in clean energy research, development, and deployment. The study, which was conducted by electrical engineering doctoral candidate Mandy Lewis in Golden, Colorado, found that placing reflective surfaces under solar panels can increase their energy output by up to 4.5%.

Dr. Pierre Berini, Distinguished University Professor, Faculty of Engineering

Over the past ten years, professor Berini has been collaborating with academic and industrial researchers to advance their projects in the NanoFab.

A UOTTAWA PROFESSOR IS LEADING ADVANCES IN NANOFABRICATION FOR FUTURE TECHNOLOGIES

For the past ten years, uOttawa Engineering professor Pierre Berini's nanofabrication research at the NanoFab, a core facility at the University of Ottawa, has been shaping the future of technology.

"Nanofabrication is essential to integration and to access operational regimes in materials that are not accessible naturally. For example, we want to have increasingly powerful electronic devices with more functions: to enable these, components and circuits must be miniaturized and integrated into small form factors," explains Professor Berini.

Over the past ten years, Berini has been collaborating with academic and industrial researchers to advance their projects in the NanoFab and creating materials and devices that are smaller and more efficient.

Located at the University of Ottawa, the NanoFab is a unique, \$30-million technology platform that hosts three labs: wet chemistry; metrology; and white and yellow clean rooms (Class 10,000).

Its sophisticated and cutting-edge equipment allows users to create structures, circuits and devices at the nanometric scale with higher precision and increased efficiency.

"The platform has huge potential to support the objectives of a wide range of user profiles in a variety of sectors. We welcome graduate students and post-docs as users, collaborators from different faculties, and industry, ranging from two-person companies to multinationals," says Pierre Berini.

The facility has supported a host of projects in fields ranging from electronic, optical and photonic circuit production to the design of biological sensors.

**“The most efficient weapon
against ISR deterioration in new
concrete infrastructure
is prevention.”
Dr. Leandro Sanchez**

Dr. Leandro Sanchez, Associate Professor,
Faculty of Engineering

IS OUR CONCRETE INFRASTRUCTURE MADE TO LAST? UOTTAWA ENGINEERING RESEARCHER EXPLAINS

Concrete is often regarded as the backbone of our infrastructure. However, our seemingly indestructible infrastructure is currently facing major challenges. Professor Leandro Sanchez, an engineering researcher at uOttawa, is dedicated to mitigating concrete deterioration and finding solutions for its high carbon footprint.

Concrete is made by mixing aggregates, such as sand and rocks, with water and cement. This common material is used in almost every building, bridge, road, or structure built in our society, so much so that it is the most consumed product on the planet, after water. However, our reliance on concrete has major consequences.

“A large proportion of critical infrastructure worldwide is currently deteriorated or deteriorating,” says Professor Leandro Sanchez, who is a prominent international researcher specializing in concrete. Professor Sanchez has always been fascinated by infrastructure and how it connects people to one another. He has also extensively studied one of the most harmful mechanisms that contributes to concrete deterioration, namely internal swelling reactions (ISRs).

**Zachary Morris’
research project could
lead to quicker diagnoses.**

BIOMEDICAL ENGINEERING MASTER STUDENT’S RESEARCH COULD IMPROVE OUR HEALTH CARE SYSTEM

Prompt diagnoses of diseases is crucial to optimize treatment outcomes. Zachary Morris, who is a master’s student in biomedical engineering, is conducting research that will help detect diseases earlier, allowing doctors to begin treatment earlier and thus improving the patient’s chances of recovery.

“We are developing a testing platform that can perform bedside diagnostics in minutes. We intend to use a chemical assay that converts the biomolecules that are correlated with a target disease, also known as disease biomarkers, into nanoparticles. Our system then uses a nano-filter to capture and count the proxy nanoparticles. When these particles are captured, they affect on-chip

fluid pressures, which we can then quantify using a new type of integrated microfluidic pressure transducer” says Zachary Morris.

Zachary Morris’ research, supervised by Professor Michel Godin, will significantly accelerate the diagnostic timeline for patients with bedside diseases. His work won first place in the Enabling Technologies for Health Care and Augmented Life category of the 2024 Engineering and Computer Science Graduate Poster Competition held at the Faculty of Engineering.

Gina Strati, Director of academic partnerships, CNL

From celebrating student awards of excellence to showcasing student-led research, CNL is enhancing the learning experience for uOttawa STEM students.

PARTNERSHIP WITH CANADIAN NUCLEAR LABORATORIES TO BOOST RESEARCH AND STUDENT OPPORTUNITIES

Collaborations between industry and academia have long spurred research and development. The partnership between Canadian Nuclear Laboratories (CNL) and the University of Ottawa not only advances knowledge, but also plays a key role in talent acquisition and development.

The partnership has recently expanded to identify, nurture, and recognize exceptional students. CNL is looking to the University of Ottawa to be a primary source of STEM graduates as clean energy development has become a priority to address climate change and support Canada's net zero emissions goals. Through a multi-year sponsorship agreement, CNL will support student-facing initiatives across three faculties, including the Faculty of Engineering. From celebrating student awards of excellence to showcasing student-led research, CNL is enhancing the learning experience for uOttawa STEM students.

This term, CNL is lead sponsor of Design Day, one of Ottawa's largest student competitions, organized by the Faculty of Engineering and featuring engineering design projects developed to solve real-life client issues.

"CNL's support is invaluable. By providing us with opportunities to apply our in-class education to real-world challenges, they have empowered us to make a meaningful impact while learning new skills. This opportunity is so important as we imagine our future career paths. I appreciate their dedication to nurturing the next generation of engineers, their meaningful insights, and the chance to expand our learning beyond the classroom!" shares Luis Ibarra Perez, third-year biomedical mechanical engineering student.

Equity, diversity and inclusion

We believe that a diversity of backgrounds and perspectives in the future generation of engineers is critical to ensuring that the new solutions and technologies developed truly respond to our society's needs.

Mavriplis' work
has had an undeniable
impact on
Canadian society.

Dr. Catherine Mavriplis, Professor, Faculty of Engineering

UOTTAWA RESEARCHER CATHERINE MAVRIPLIS WINS EDI AWARD FOR TRANSFORMING THE STEM LANDSCAPE IN CANADA

Trained as an aerospace engineer, Professor Catherine Mavriplis has first-hand experience being one of few women in a male-dominated field. This fuelled her passion for equity, diversity and inclusion (EDI), leading to a dual-research career studying aerospace engineering as well as the systematic gaps that impede gender diversity in STEM and developing ways to address these gaps.

Mavriplis' work has had an undeniable impact on Canadian society. From 2011 to 2020, she was NSERC's Chair for Women in Science and Engineering. During this time, female enrolment in software engineering doubled in Canada, and the percentage of women professors in engineering rose from 14% to 17%.

Dr. Sawsan Abdul-Majid with a group of participants from her ANCWT program

CHAMPIONING INCLUSION AND DIVERSITY: PROF. SAWSAN ABDUL-MAJID WINS ONTARIO GOVERNMENT DIVERSITY AWARD

In recognition of her exceptional, long-standing contribution to strengthening the role of immigrant and refugee women in science, technology, engineering and mathematics (STEM), Dr. Sawsan Abdul-Majid has received Ontario's 2023 Champion of Diversity Award in the inclusion and diversity category.

Abdul-Majid has over 25 years of experience in teaching and research, as well as eight years of industry experience in engineering. Her journey began in Bulgaria, where she earned a PhD in optical communication systems from Varna University. She then joined the Faculty of Engineering at Al Zawiya University in Libya as a professor, before holding further positions at Baghdad University of Technology, Iraq, and Koya University of Kurdistan, Iraq.

The Ontario Government
Diversity Awards recognizes outstanding community leaders who support immigrant success, economic growth, cultural diversity and inclusion in the province.

Abdul-Majid has published over 45 research papers on silicon photonics, PIC, optical amplifiers and optical systems. A community leader, she received a Professional Engineers of Ontario (PEO) Certificate of Recognition for five years of volunteer service in engineering in Ottawa. She is licensed as a professional engineer by PEO and has been a member of the Faculty of Engineering at uOttawa since 2008.

Outreach

A group of students and a female instructor are gathered around a table in a laboratory or workshop setting. They are all wearing safety goggles and looking intently at a project on the table. The instructor, a young woman with brown hair, is pointing at the project. The students, including a girl with blue safety goggles and a boy with clear safety goggles, are also looking at the project. The background is slightly blurred, showing more of the lab environment.

The Faculty of Engineering Outreach programs offers a variety of exciting, fun, and experiential learning opportunities for children and teens throughout the year. Engineering Outreach is a proud member of Actua.

WHY IS IT IMPORTANT TO ENGAGE YOUTH IN ENGINEERING?

Traditional STEM (science, technology, engineering and math) teaching methods sometimes create barriers for elementary and high school students. Participation in activities from a young age can help students overcome them.

At the University of Ottawa, our first activities of this type go back to 1991, when 60 youth took part in the very first Adventures in Engineering summer camp. Today, more than 30 years later, over 43,000 youth a year register for the Engineering Outreach Office's workshops, events and camps.

Alumni

We are proud of our alumni
who represent the Faculty and its
name with pride and excellence,
in their respective fields of
work and around
the world.

Sandra Odendahl, BASc in chemical engineering

Sandra Odendahl who's built an outstanding career in finance, shares her story, and offers advice to current engineering students.

ALUMNA'S JOURNEY: FROM CHEMICAL ENGINEERING TO FINANCE

When people hear the word “engineering,” they often associate it with design, construction and problem-solving in fields such as technology, infrastructure, or machinery. That’s part of what engineers do — but not all.

This is the story of one remarkable alumna, Sandra Odendahl, who studied chemical engineering at uOttawa and is currently senior vice president and head, sustainability, diversity, and partnerships, at BDC.

Odendahl knew that to build a career and live a life with purpose and impact, you have to be willing to step out of your comfort zone. She worked as a risk analyst in the banking sector, to understand how resource projects get financed. This position, which she initially saw as a detour before returning

to her field of expertise, has been the springboard for a successful career spanning more than 25 years in finance, including leading enterprise-wide sustainability, environmental and social risk management and social finance programs and strategies at two of Canada’s chartered banks.

A committed community volunteer, Odendahl has enjoyed serving on non-profit boards, expert panels, and advisory groups throughout her career. She has received several honours for her contributions to creating more stable, sustainable, and inclusive communities, including the 2023 Faculty of Engineering Alumni Award of Excellence for her trailblazing work in sustainable finance and volunteer efforts.
