

# Recording of Lectures

The Undergraduate Medical Education records most of its non-mandatory lectures within the pre-clerkship curriculum. The recordings are a supplemental service offered by the Faculty at the students' request. They are meant to be an additional study tool and not to replace class attendance. The approved recordings are released within 48 hrs following the lecture.

It is important for students to be aware that the recordings are not reliable. Multiple factors such as non-consent from the professor and system failure will prevent the availability of some recordings.
