Residents completing the Internal Medicine rotation will consistently and correctly demonstrate competence appropriate for the level expected of a family medicine resident, in the following areas:

1. General Attitudes, Skills and Behaviours relevant to the CTU rotation:
   a. Takes ownership for patients (rounds on assigned patients, assesses patient status, progress and plans, completes appropriate daily progress notes and reads around specific patient problems or concerns).
   b. Gathers, reviews and appropriately uses necessary information (lab results, imaging, consults, notes from other allied health care professionals).
   c. Reviews chart and history before rounds and is prepared to discuss the patient care plan.
   d. Communicates effectively with patients, families, colleagues, preceptors, consultants and allied health professionals including active participation in multidisciplinary rounds.

2. Hospital Admission
   a. Triages and prioritizes admissions (sees the sickest patients first) and advocates for patient to receive care from the most appropriate in-patient service.
   b. Completes accurate and appropriate admission history and physical examinations (See Box 1).

   Box 1. Components of an “Accurate and Appropriate” Admission History and Physical Examination:
   a. Identifies relevant medical and social issues including the patient’s context, illness experience, goals of admission, and barriers to discharge.
   b. Gathers information from collateral sources as necessary.
   c. Demonstrates correct and appropriate physical examination skills.
   d. Demonstrates stage-of-training appropriate medical knowledge and clinical reasoning skills, describing clear reasons for admission, appropriate differential diagnoses. Justifies appropriate and selective use of diagnostic tests and interprets the results of these investigations appropriately.
   e. Develops appropriate management plan, and justifies treatments.
   f. Writes clear admission notes and orders.
   g. Presents patient cases in a clear, concise and organized (problem based) fashion appropriate to the stage of training.
   h. Communicates the plan clearly to patient and patient’s family.
   i. Actively and effectively discuss code status (including DNR).

3. Routine Care of Admitted Patients
   a. Takes ownership for patients (rounds on assigned patients, assesses patient status, progress and plans, completes appropriate daily progress notes and reads around specific patient problems or concerns).
   b. Gathers, reviews and appropriately uses necessary information (lab results, imaging, consults, notes from other allied health care professionals).
   c. Reviews chart and history before rounds and is prepared to discuss the patient care plan.
   d. Communicates effectively with patients, families, colleagues, preceptors, consultants and allied health professionals including active participation in multidisciplinary rounds.

4. Acute Situations
   a. Recognizes patients with unstable clinical status requiring higher urgent interventions.
   b. Develops appropriate management plans. Recognizes personal limitations and seeks help appropriately.
   c. Collaborates with support staff and consulting teams effectively.
   d. Communicates with patients and families effectively and documents accurately.

5. Discharges
   a. Develops appropriate and safe discharge plans
   b. Ensures appropriate follow up / coordination with family physician, consultants, investigations, care givers.
   c. Prepares discharge package actively, and ensures a complete, clear and accurate discharge summary is sent to the family physician promptly after discharge.
   d. Ensures correct medications are prescribed at discharge

   Box 2. Core Procedures – Inpatient Medicine
