

Canadians' Views on Canada's Energy Future

University of Ottawa Positive Energy Summary

POSITIVE
ENERGY

*Submitted by Nanos to the University of Ottawa, October, 2015
(Submission 2015-691)*

> *Support for policy actions*

Overall Canadians generally believe that it is possible to develop resources while protecting the environment and are supportive of investments in the renewable energy sector. They also clearly expect the federal government to take the lead and think the national interest is more important than local, provincial or Aboriginal views.

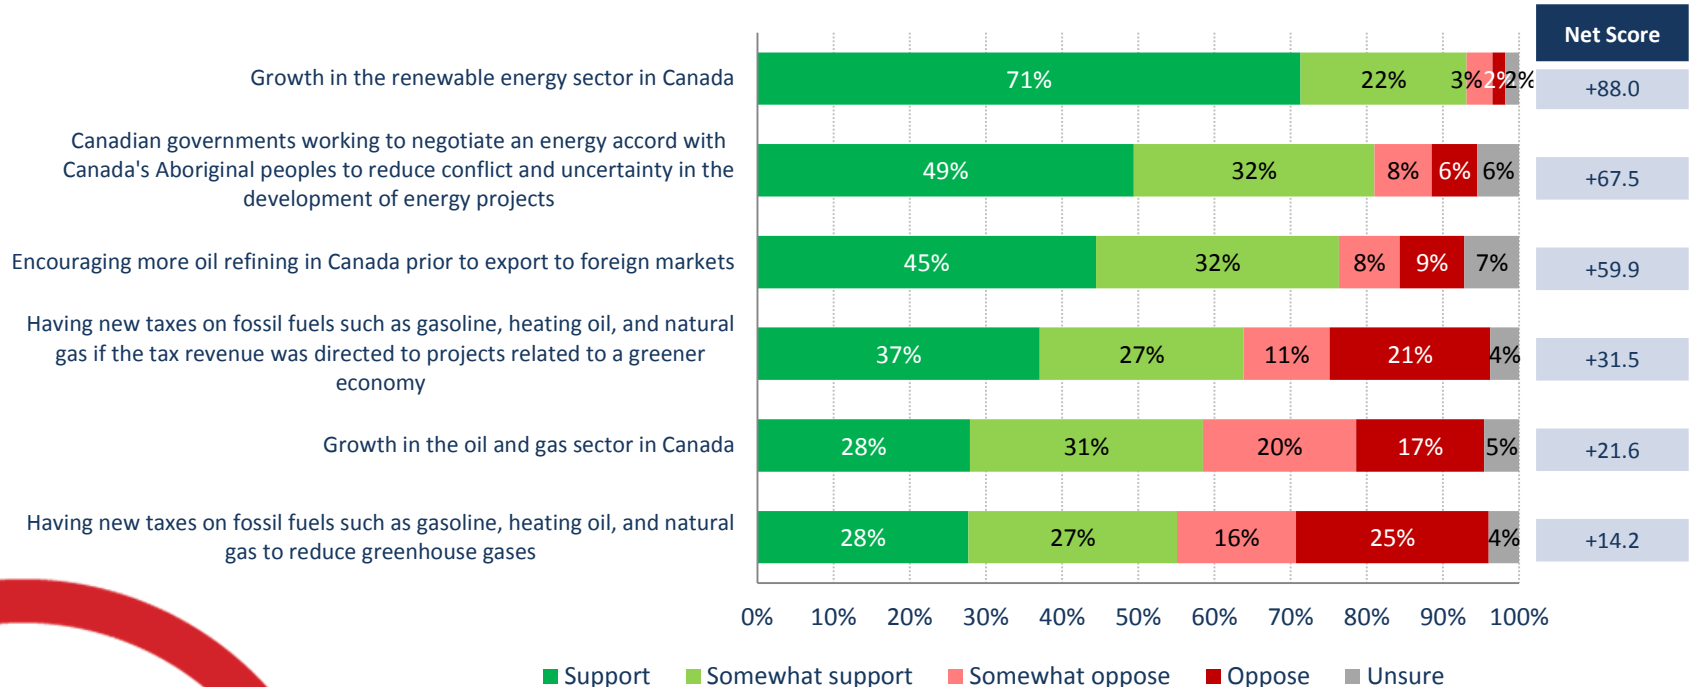

- **Support for policy actions** – The strongest level of support among six ideas is for growth in the renewable energy sector in Canada (71% support and 22% somewhat support). There is also considerable support for governments negotiating an energy accord with Aboriginal peoples to reduce conflict and uncertainty (49% support and 32% somewhat support) and to encourage more refining in Canada (45% support and 32% somewhat support). A majority of Canadians also supported having new taxes on fossil fuels (28% support and 27% somewhat support) and for growth in the oil and gas sector in Canada (28% support and 31% somewhat support).
- **Developing resources while protecting the environment**– Most Canadians think it is either possible (55%) or somewhat possible (36%) to develop energy resources while protecting the environment.
- **Willingness to be more supportive of fossil fuel development** – When it comes to the development of fossil fuel energy resources, 35% think it is possible and 42% somewhat possible that they would be more supportive if Canada had a more proactive climate change policy.
- **Protecting the environment vs. creating jobs** – More Canadians think the priority should be on protecting the environment (57%) than growth and job creation (29%). Since March of this year, more people have become uncertain (from 9% to 14%) or in favour of jobs (from 24% to 29%).
- **Transition to cleaner energy** – A majority of Canadians (54%) think we should have a long term transition away from fossil fuels to cleaner fuels rather than an aggressive transition (39%).

- **Federal vs. provincial leadership** – There is a clear preference (68%) for the federal government to take the lead on major pipeline projects over the provincial governments (24%). The desire for federal leadership (78%) is even more pronounced for reducing greenhouse gas emissions.
- **Relative importance of national vs. other interests** – When considering whether a proposed energy project should move forward, a majority of Canadians think the national interest should take precedence over the interests of local residents, Aboriginal peoples and people in their province.
 - A majority (57%) and higher than in March of this year (51%), think that national interest should be more important than the views of local residents.
 - 54% (up from 49% in March) think the national interest is more important than the interest of the views of First Nations, Métis and Inuit peoples (36%).
 - 58% (up from 49% in March) think the national interest is more important than the interests of the views of people in your province.
- **Performance on benefits-costs of energy projects and climate change** – Canadians are generally negative when it comes to how well Canada does at ensuring the benefits of energy projects are distributed equitably across Canada (24% very poor and 27% poor). They are even more negative when it comes to having environmental policies on climate change that align with the views of Canadians (35% very poor and 26% poor).
- **Credibility on environmental policies and climate change** – Only 3% think Canada has a high level of credibility and 10% a somewhat high level of credibility on the international stage when it comes to environmental policies on climate change (net 13% high credibility). Against this, 46% think Canada has a low and 18% somewhat low level of credibility (net 64%).

These observations are based on an RDD dual frame (land- and cell-lines) hybrid telephone and online random survey of 1,000 Canadians, 18 years of age or older, between October 15th and 16th, 2015 as part of an omnibus survey. The research was commissioned by University of Ottawa Positive Energy. The margin of error for a random survey of 1,000 Canadians is ± 3.1 percentage points, 19 times out of 20.

Support for Potential Actions

QUESTION – Do you think Canada currently has a high, somewhat high, an average, somewhat low or low level of credibility on the international stage when it comes to environmental policies on climate change?

Methodology

Methodology

Nanos conducted an RDD dual frame (land- and cell-lines) hybrid telephone and online random survey of 1,000 Canadians, 18 years of age or older, between October 15th and 16th, 2015 as part of an omnibus survey. Participants were randomly recruited by telephone using live agents and administered a survey online. The sample included both land- and cell-lines across Canada. The results were statistically checked and weighted by age and gender using the latest Census information and the sample is geographically stratified to be representative of Canada.

Individuals randomly called using random digit dialling with a maximum of five call backs.

The margin of error for a random survey of 1,000 Canadians is ± 3.1 percentage points, 19 times out of 20.

The research was commissioned by University of Ottawa Positive Energy.

Note: Charts may not add up to 100 due to rounding.

About Nanos

Nanos is one of North America's most trusted research and strategy organizations. Our team of professionals is regularly called upon by senior executives to deliver superior intelligence and market advantage whether it be helping to chart a path forward, managing a reputation or brand risk or understanding the trends that drive success. Services range from traditional telephone surveys, through to elite in-depth interviews, online research and focus groups. Nanos clients range from Fortune 500 companies through to leading advocacy groups interested in understanding and shaping the public landscape. Whether it is understanding your brand or reputation, customer needs and satisfaction, engaging employees or testing new ads or products, Nanos provides insight you can trust.

Technical Note - H

Element	Description
Organization who commissioned the research	University of Ottawa Positive Energy
Final Sample Size	1000 Randomly selected individuals.
Margin of Error	±3.1 percentage points, 19 times out of 20.
Mode of Survey	RDD dual frame (land- and cell-lines) hybrid telephone and online [omnibus] survey
Sampling Method Base	The sample included both land- and cell-lines RDD (Random Digit Dialed) across Canada.
Demographics (Captured)	Atlantic Canada, Quebec, Ontario, Prairies, British Columbia; Men and Women; 18 years and older. Six digit postal code was used to validate geography.
Demographics (Other)	Age, gender, education, income
Fieldwork/Validation	Live interviews with live supervision to validate work as per the MRIA Code of Conduct
Number of Calls	Maximum of five call backs.
Time of Calls	Individuals were called between 12-5:30 pm and 6:30-9:30pm local time for the respondent.
Field Dates	October 15 th to 16 th , 2015.
Language of Survey	The survey was conducted in both English and French.

Element	Description
Weighting of Data	The results were weighted by age and gender using the latest Census information (2014) and the sample is geographically stratified to ensure a distribution across all regions of Canada. See tables for full weighting disclosure
Screening	Screening ensured potential respondents did not work in the market research industry, in the advertising industry, in the media or a political party prior to administering the survey to ensure the integrity of the data.
Excluded Demographics	Individuals younger than 18 years old; individuals without land or cell lines could not participate.
Stratification	By age and gender using the latest Census information (2014) and the sample is geographically stratified to be representative of Canada. Smaller areas such as Atlantic Canada were marginally oversampled to allow for a minimum regional sample.
Estimated Response Rate	15% percent, consistent with industry norms.
Question Order	Question order in the preceding report reflects the order in which they appeared in the original questionnaire.
Question Content	This was module five of an omnibus survey. The preceding modules included questions on unprompted issues of national concern and vote preferences, as well as questions regarding the economic impact of the election.
Question Wording	The questions in the preceding report are written exactly as they were asked to individuals.
Survey Company	Nanos Research
Contact	Contact Nanos Research for more information or with any concerns or questions. http://www.nanosresearch.com Telephone:(613) 234-4666 ext. Email: info@nanosresearch.com.
