

Canadians have diverse views on electrifying more of their energy needs; those electrifying or planning to electrify on the decline since 2023.

The research gauged the opinions among Canadians on climate ambition, alignment of climate policies with views of Canadians and Indigenous partnerships. It also delved into views on energy affordability and Canadians' intentions to electrify more of their energy needs.

Nanos conducted an RDD dual frame (land- and cell-lines) hybrid telephone and online random survey of 1,086 Canadians, 18 years of age or older, between April 28th to May 1st, 2024, as part of an omnibus survey.

The margin of error for a random survey of 1,086 Canadians is ± 3.0 percentage points, 19 times out of 20.

The research was commissioned by the University of Ottawa's Positive Energy program and was conducted by Nanos Research.

Key Findings—Climate, Indigenous Partnerships

1

VIEWS ON TIMING TO ADDRESS CLIMATE CHANGE

Consistent with recent waves, the majority of Canadians ([51%](#)) believe it is the best time (score of 7-10 out of 10) for Canada to be ambitious in addressing climate change while less than one in three ([31%](#)) believe it is the worst time (score of 0-3 out of 10). Liberal Party voters are far more likely to believe it is the best time to be ambitious in addressing climate change ([mean of 7.5 out of 10](#)) compared to Conservative Party voters ([mean of 2.7 out of 10](#)).

When asked the reason for their views, those who think it is the best time (score 7-10 out of 10) most often said because we need to act now/climate change can't wait ([86%](#)); while those who had middle range scores (score of 4-6 out of 10) and those who believe it is the worst time (score 0-3 out of 10) most often said so because of the current financial situation, inflation and upcoming recession ([24%](#); [21%](#) respectively).

2

JOB DONE BY CANADA HAVING POLICIES ON CLIMATE CHANGE THAT ALIGN WITH CANADIAN VIEWS

Canadians are more likely to say Canada currently does a poor/very poor job ([42%](#)) at having environmental policies on climate change that align with the views of its citizens rather than a very good/good job ([16%](#)). About one in three Canadians ([36%](#)) believe they are doing an average job, which is a decrease compared to the previous wave in 2023 ([42%](#)).

When asked the reason for their views, those who believe Canada currently does a poor/very poor job most often said because we are not doing enough/all talk no action/targets are not being met ([21%](#)), followed by the carbon tax is wrong/has no impact/only adds additional costs to the average Canadian ([21%](#)); those who believe Canada does a good/very good job most often said because Canada is making progress/is ahead of other countries/policies are somewhat aligned with carbon reduction targets ([59%](#)).

3

JOB DONE BY GOVERNMENTS IN CANADA ENSURING ENERGY IS AFFORDABLE WHILE WORKING TO MEET CLIMATE CHANGE TARGETS

Canadians are over five times more likely to say governments in Canada do a very poor/poor job ([52%](#)) of ensuring energy is affordable as Canada works to meet its climate change targets rather than a very good/good job ([10%](#)). Over one in four Canadians say governments do an average job ([29%](#)) at this, which is a decrease compared to the previous wave ([34% in 2023](#)). There has been an increase in the proportion who say governments do a very poor job ([30%](#); [compared to 24% in May 2023](#)), back to November 2022 levels ([30%](#)).

When asked the reason for their views, those who believe governments currently do a poor/very poor job most often said because energy/green alternatives/gas prices are high ([62%](#)), while those who believe governments do a good/very good job most often said because energy costs are reasonable/more affordable than other countries/should be higher to push people to green alternatives([53%](#)).

4

VIEWS ON CANADA'S PERFORMANCE ON BUILDING CONSTRUCTIVE PARTNERSHIPS WITH INDIGENOUS PEOPLES FOR ENERGY PROJECTS

About three in ten Canadians say Canada is currently doing a poor/very poor job ([17% poor; 10 very poor](#)) at building constructive partnerships with Indigenous peoples for energy projects, while close to one in five say the country is doing a good/very good job ([3% very good; 16% good](#)). There has been a significant decrease in the proportion who say Canada does a poor job ([17%](#)) compared to the previous wave in 2021 ([30%](#)), while an increase can be observed among those who say they are unsure ([16% compared to 3% in 2021](#)).

When asked the reason for their views, those who say Canada is currently doing a poor/very poor job most often said because the Canadian government has not respected Indigenous people/treats them badly ([42%](#)); while those who believe the country is doing a good/very good job most often said because efforts are/ seem to be made to partner ([96%](#)).

Key Findings—Electrification and Energy

5

INTEREST AND ACTION TAKEN IN TRANSITIONING TO ELECTRICITY

When asked to think of their energy needs and the actions they are taking to transition more of the energy they use to electricity and away from things like gasoline, most Canadians say they are not interested in transitioning ([32% compared to 26% in 2023](#)), closely followed by those who say they are interested in transitioning and have taken steps to do so ([30% compared to 25% in 2023](#)). With a sharp decline compared to the previous wave, a similar proportion of respondents say they are interested in transitioning but have not started yet ([29% compared to 41% in 2023](#)). Ten per cent say they are interested in transitioning and have done all that they plan to do ([compared to 8% in 2023](#)). Right leaning Canadians are less likely to be interested in transitioning with a majority saying they are not interested in transitioning ([59%](#)) and less than one in five ([19%](#)) saying they are interested in transitioning and have taken steps to do so.

6

TOP TRUSTED GROUPS TO ADVANCE A RESPONSIBLE DIALOGUE ABOUT THE ECONOMY, ENERGY AND THE ENVIRONMENT

Over a quarter of Canadians are unsure ([26%](#)) who to trust when asked about the top trusted groups to advance a responsible dialogue about the economy, the energy sector and the environment; an increase compared to the previous waves ([20% in 2022; 12% in 2015](#)).

While the top trusted groups to advance a responsible dialogue about the economy, the energy sector and the environment remain universities ([20%; 23% in 2022; 33% in 2015](#)), followed by the federal government ([16%; 18% in 2022; 23% in 2015](#)) and environmental groups ([16%; 17% in 2022; 17% in 2015](#)), there is a decrease in trust compared to previous waves denoting less unanimity among Canadians.

7

CANADIANS CONCERNED ABOUT ENERGY PRICES OVER NEXT SIX MONTHS

Consistent with the previous waves, about seven in ten Canadians are concerned (score of 7-10 out of 10) ([66%; 66% in 2023; 68% in 2022](#)) about energy prices they will pay for things like heating and transportation over the next six months.

When asked why they had that opinion, those who said they were concerned most often said because of high costs and prices are increasing ([32%](#)), followed by the carbon tax and high taxes ([13%](#)); while those who were mildly concerned (score of 4-6 out of 10) and not concerned (score of 0-3 out of 10) most often said because they can afford it and it's not expensive ([30%; 37% respectively](#)), followed by limiting their use of energy/fossil fuel ([19% and 24% respectively](#)).

The background of the slide features a dark, atmospheric photograph of industrial smokestacks. Several tall, dark chimneys are visible at the bottom, each emitting a thick, dark plume of smoke that rises and spreads across the upper half of the frame. The sky is a deep, dark grey, and the smoke has a slightly lighter, textured appearance. In the top right corner, there is a bright green triangular graphic element. On the right side, there is a vertical green bar.

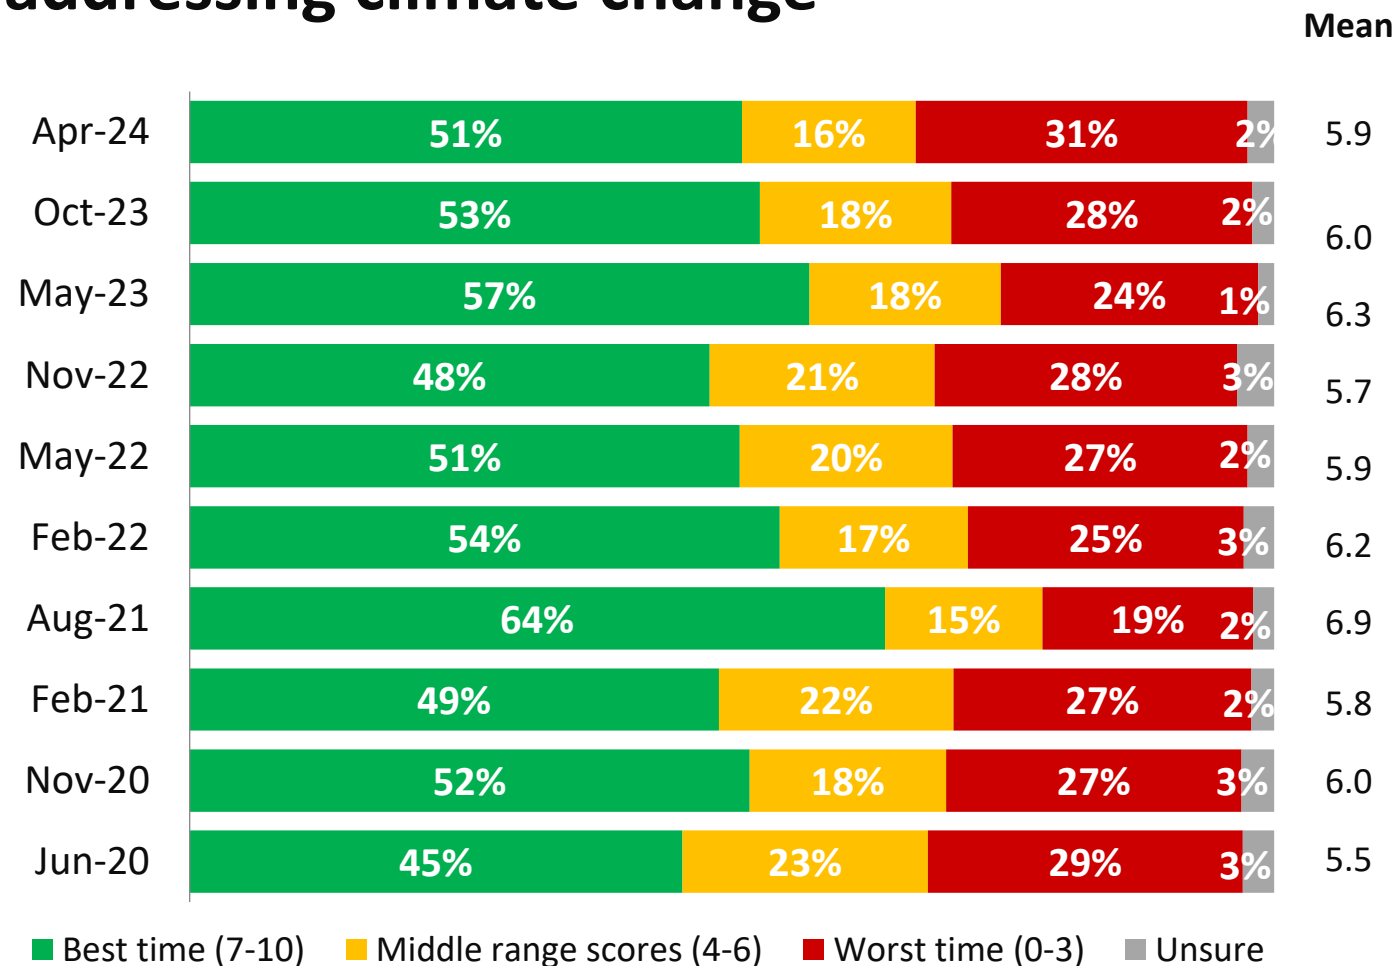

Climate ambition

Consistent with the previous wave, most Canadians (51% in 2024; 53% in October 2023) believe it is the best time (score of 7-10 out of 10) for Canada to be ambitious in addressing climate change even if there are costs to the economy.

Over one in four Canadians (27%, see next slide) rate this as absolutely the best time to be ambitious (score of 10 out of 10).

Q – As you know many Canadians are concerned about both [ROTATE] climate change and the economy. On a scale of 0 to 10 where 0 means this is absolutely the worst time and 10 is absolutely the best time, how good a time is it for Canada to be ambitious in addressing climate change even if there are costs to the economy?

An aerial photograph of a forest fire. A bright orange and yellow fire line is visible, winding through a dense green forest. Thick white and grey smoke is rising from the fire, filling the upper portion of the image. The overall scene is dark and dramatic, emphasizing the impact of the fire on the environment.

Climate policies aligned with views of Canadians

More than two in five Canadians think Canada currently does a very poor/poor job (42%) at having environmental policies on climate change that align with the views of Canadians—an increase compared to the previous wave (35% in May 2023).

Job done by governments in Canada at ensuring energy is affordable

Canadians are over **5X** more likely

to say governments in Canada, do a very poor/poor job (52%) rather than a very good/good job (10%) of ensuring energy is affordable as Canada works to meet its climate change targets. This is a slight increase compared to the previous wave in May 2023 (46%), rather than a very good/good job (10%).

Of note, the percentage of Canadians who say governments in Canada do an average job at ensuring energy affordability has declined since the previous wave (29% compared to 34% in May 2023).

A person with long dark hair, wearing a blue jacket and dark pants, is seen from behind, walking through a field of tall, dry grass. In the background, there are rolling hills or mountains under a cloudy sky. The image has a dark, muted color palette with a green geometric shape in the top right corner.

Building Indigenous partnerships

The proportion of Canadians who think Canada currently does a poor/very poor job at building partnerships with Indigenous peoples for energy projects has decreased noticeably since the previous wave in April 2021 (27% compared to 41% in 2021)

The proportion of Canadians who are unsure is more than five times higher than in 2021 (16% compared to 3% in 2021).

Trust in advancing responsible dialogue about the economy, energy and the environment

Uncertainty over who Canadians would trust most has increased since 2022, with more than a quarter being unsure who they would trust most (26% compared to 20% in 2022 and 12% in 2015).

While rankings remain similar to the previous wave, opinions are divided over who respondents would trust. About one in five (20%) believe universities to be the most trusted group—consistent with 2022 (23%), but down from one in three (33%) in 2015—followed by the federal government (16%; down from 18% in 2022 and 23% in 2015) and provincial governments (13%; up from 10% in 2022 and 9% in 2015).

METHODOLOGY

Nanos conducted an RDD dual frame (land- and cell-lines) hybrid telephone and online random survey of 1,086 Canadians, 18 years of age or older, between April 28th to May 1st, 2024 as part of an omnibus survey. Participants were randomly recruited by telephone using live agents and administered a survey online. The results were statistically checked and weighted by age and gender using the latest Census information and the sample is geographically stratified to be representative of Canada.

Individuals were randomly called using random digit dialing with a maximum of five call backs.

The margin of error for a random survey of 1,086 Canadians is ± 3.0 percentage points, 19 times out of 20.

The research was commissioned by Positive Energy at the University of Ottawa and was conducted by Nanos Research.

Note: Charts may not add up to 100 due to rounding.

Element	Description
Research sponsor	Positive Energy at the University of Ottawa
Population and Final Sample Size	1,086 Randomly selected individuals.
Source of Sample	Nanos Probability Panel
Type of Sample	Probability
Margin of Error	±3.0 percentage points, 19 times out of 20.
Mode of Survey	RDD dual frame (land- and cell-lines) hybrid telephone and online omnibus survey
Sampling Method Base	The sample included both land- and cell-lines RDD (Random Digit Dialed) across Canada.
Demographics (Captured)	Atlantic Canada, Quebec, Ontario, Prairies, British Columbia; Men and Women; 18 years and older. Six digit postal code was used to validate geography.
Fieldwork/Validation	Live CATI interviews with live supervision to validate work.
Number of Calls	Maximum of five call backs.
Time of Calls	Individuals were called between 6:30-9:30pm local time for the respondent.
Field Dates	April 28th to May 1st, 2024 .
Language of Survey	The survey was conducted in both English and French.
Standards	Nanos Research is a member of the Canadian Research Insights Council (CRIC) and confirms that this research fully complies with all CRIC Standards including the CRIC Public Opinion Research Standards and Disclosure Requirements. https://canadianresearchinsightscouncil.ca/standards/

Element	Description
Weighting of Data	The results were weighted by age and gender using the latest Census information (2021) and the sample is geographically stratified to ensure a distribution across all regions of Canada. See tables for full weighting disclosure.
Screening	Screening ensured potential respondents did not work in the market research industry, in the advertising industry, in the media or a political party prior to administering the survey to ensure the integrity of the data.
Excluded Demographics	Individuals younger than 18 years old; individuals without land or cell lines, and individuals without internet access could not participate.
Stratification	By age and gender using the latest Census information (2021) and the sample is geographically stratified to be representative of Canada. Smaller areas such as Atlantic Canada were marginally oversampled to allow for a minimum regional sample.
Estimated Response Rate	12%, consistent with industry norms.
Question Order	Question order in the tabulations appended to this report reflects the order in which they appeared in the original questionnaire.
Question Content	Topics on the omnibus ahead of the survey content included: views on political issues, views on economic issues, EVs, healthcare, employers, IT services, mental health, a non-profit, postal services and the arts and culture sector.
Question Wording	The questions in the preceding report are written exactly as they were asked to individuals.
